

GDMIS is a registered small business established in 1991, and incorporated in the State of Virginia. GDMIS currently has offices located in Austin, TX, Front Royal, VA and at the Stennis Space Center in Mississippi. GDMIS's corporate headquarters are located in Middleburg, VA.

GDMIS is a digital mapping and GIS support services contractor with broad experience in quality development of digital applications. We support the mapping and GIS database needs of Federal Government (USGS, USFS, FEMA); State Government (Texas, Mississippi, California); Local Municipalities (Santa Barbara, CA, Cape May, NJ, Front Royal, VA), as well as private companies (Michael Baker, Jr. Company, Greenhorne & O'Mara, Dewberry & Davis)

Up-to-date technology is sometimes hard to fund with public money. Not only is there a cost for the hardware and software upgrades, there is a cost for employee training and the loss of productivity until the new equipment is fully utilized. GDMIS will work with you to define win-win partnerships to share the financial burden of large projects and to accelerate the accumulation of data that will make the system cost effective.

GDMIS's worked with the Texas Strategic Mapping Program, know as StratMap, an ideal example of funding partners working to achieve multiple goals while sharing the financial burden of a large project. The Texas Natural Resource Information Service (TNRIS), a division of the Texas Water Development Board (TWDB), wanted an updated digital base map of the State of Texas with multiple data layers that could be delivered to online customers over the Internet with minimal staff effort. A team was developed that included TWDB, the USGS, the Texas Geographic Society, with USGS and the State of Texas covering up to 75% of the cost of the development costs of the data. The concepts (current, photorevised, vertically integrated digital datasets) developed for StratMap closely parallel those for the USGS National Map and the data developed will be used by both agencies.

GDMIS defines projects with an eye on efficiency. As a small business we are not able to employ staff to cover every contingency and have instead developed relationships with diverse groups of small businesses that specialize in those areas we do not staff.

Each contract brings specific requirements and we seek out the most technologically advanced companies whose employees specialize in the professional areas of interest to provide our employer the best contract solution possible. Specialized partners function as a customized team guided by GDMIS's professional management strategies and technical expertise to provide the equivalent of big company results on small business contracts. Not only does the GDMIS approach provide the desired technical results, it does so in an extremely efficient and cost effective manner.

We welcome you to bring your project ideas to GDMIS, and begin discussions that will lead to positive results!
