

In support of our internal and external production activities, GDMIS is offering comprehensive image processing services to support several markets including remote sensing, mapping and cartographic product development, graphic arts and reprographics. The scanning and imaging staff at GDMIS are experts in the use of image data and exploiting that information to meet the varied needs of analysts to include environmentalists, engineers, foresters, natural resources and the military. Our systems are managed by technical personnel with years of both scanning and imaging experience and the necessary workflow and operational expertise to assure both large and small tasks are completed on time and within budget.

Our imaging computing systems include multiple-processor imaging workstations running the leading image processing software modules for remote-sensing, cartographic services and the graphics markets. We have full image write capabilities to CD and DVD as well as dedicated bandwidth for Internet delivery when appropriate.

On the left are some examples of our imaging capabilities. Contact GDMIS for more information on the types of image processing services that we can provide for your company.
