- Up to 1000 DPI

Full Color

- Up to 40" max width
- Up to 800 DPI

GDMIS, a leader in scanning and raster to vector conversion services offers high volume, high and low resolution scans, low cost scanning and imaging services to the government and the private sector. As a user of scanned imagery to support internal raster to vector needs, GDMIS has become expert in the use and manipulation of binary, grayscale, and color imagery.

GDMIS can provide feature extraction, classification, mosaicing, and other production services involving both high and low resolutions, large document formats, and varying source quality and materials.

With the use of advanced scanning technology, GDMIS scanning services can help you meet your scanning needs while maintaining image accuracy and format.

Over the last 2 years, 40,000+ scans have been produced at GDMIS of map documents in formats ranging from A to E+ with resolutions ranging from 100 dpi to 1600 dpi.

Typical uses of the scanned images include raster to vector conversion, image backdrop, engineering, medical imaging, and intelligence. GDMIS is also very much involved in developing software and production based techniques for the intelligent separation and vectorization of user specified color categories within the image data itself.
